## SUMMARY

---

Backend and reliability engineer with ~5 years at enterprise scale, following earlier web-development work from 2015. Built and ran Go payment-authorization services on distributed SQL (CockroachDB) and carried on-call for them. Now works on production reliability, observability, and deployment governance for a large, integration-heavy Home Services platform: primary owner of the telemetry applications, plus SLOs, Critical User Journeys, and a reusable change-approval-governed deployment path.

## SKILLS

---

**Languages & Backend:** Go (Golang), Python, Java, REST APIs, CockroachDB (distributed SQL, PostgreSQL-compatible), SQL

**Cloud & Platform:** GCP, GKE, Kubernetes, Pivotal Cloud Foundry, BigQuery, Terraform, CI/CD (Jenkins, Spinnaker), branch protection, static analysis, Cloud Run, Cloud Build, Linux, Salesforce / Apigee / Copado integrations

**Reliability & Observability:** SRE, OpenTelemetry / OTLP, distributed tracing (Jaeger), Prometheus, Grafana, PagerDuty, SLOs/SLIs, Critical User Journeys, health checks, blameless postmortems, alert-noise reduction, incident response, on-call, pprof profiling

## EXPERIENCE

---

### The Home Depot, Home Services · Site Reliability Engineer

*Mar 2026 to Present · Remote (Atlanta, GA)*

Broadened from backend development into production reliability, observability, platform engineering, and deployment governance for a large, integration-heavy platform (Salesforce, GCP, internal services).

- **Deployment governance:** drove a production change through the change-approval board solo. Presented to senior management, answered their questions, and validated readiness with measured load-test evidence. Built the reusable deployment path that lets non-developers ship Home Services applications to production through the required gates: governance, security scanning, static analysis, hardened base images, production readiness, branch protection, and rollback planning. Took the first application through it and made it the repeatable pattern later applications followed.
- **Telemetry ownership:** primary owner of the Home Services telemetry applications: Python and Go services on GCP (BigQuery, GKE, Cloud Run) that ingest Salesforce data into BigQuery for Grafana, with team input. Cut an over-engineered star-schema after validating that the actual Grafana / alerting query patterns did not justify the normalization. Shipped the metrics ETL (design, schema, CI/CD, production readiness) with a clean multi-hour backfill that auto-provisioned its table.
- **Observability & SLOs:** helped define and operationalize SLOs, health checks, Critical User Journeys, and a leadership-facing monitoring model (which applications are healthy, which SLOs are met, where more engineering effort is needed), with traffic-weighted roll-ups across business domains. Built on OpenTelemetry, Prometheus, Grafana, and BigQuery.
- **Alert quality:** cut recurring false-positive alerts by replacing time-based muting with volume-aware thresholds, peer cross-checked so real incidents still page. Tied each alert to a specific CUJ step, a user impact, and a runbook.
- **Incident response:** became the person other teams call to pull the right logs and scope impact quickly, including live in front of senior management, while consistently bringing in the formal on-call engineer rather than becoming a shadow support path.
- Named SME for specific applications; helped onboard newer engineers and contractors as the team grew.

## **The Home Depot, Enterprise Payments · Software Engineer II**

*Jan 2024 to Mar 2026 · Remote (Atlanta, GA)*

- Built and maintained Go services on the payments authorization platform (credit/debit authorization, reversal, and refund) on CockroachDB (distributed SQL), deployed to GKE and Pivotal Cloud Foundry in a 2,300+ store retail environment. Worked a card-authorization broker service: request validation, duplicate detection, and format conversion between upstream clients and downstream processors.
- Worked a centralized gift-card API from initial design onward: balance inquiry, authorization/reversal, activation, and balance adjustment, replacing fragmented per-channel implementations. Contributed design and implementation, production-readiness review, alerting, and on-call support.
- Contributed to modernization off legacy systems.
- Carried the on-call ("interrupt") rotation and contributed to production incident response: fast log retrieval, hypothesis generation, and cross-team coordination across production incidents. Contributed to the resulting blameless postmortems. Delivered under a Jenkins to Spinnaker to GKE pipeline, including same-day hotfixes under production pressure.

## **Daugherty Business Solutions, Software Engineer, Enterprise Payments Consulting Engagement**

*Apr 2022 to Jan 2024 · Client: The Home Depot*

- Joined a card-authorization service before it deployed to any stores; contributed Go code, tests (Ginkgo/Gomega), and rollout support as it went to production.
- Built and supported card-authorization routing and processor-integration logic with duplicate-check and validation guarantees.
- Contributed to gift-card API services supporting payment workflows.
- Built automated testing and continuous-delivery controls for these financial transaction systems.

## **Menez Enterprises, Independent Software Consultant**

*Sep 2018 to Apr 2022 · Greater Orlando / Tampa, FL · Freelance*

- Built and maintained web applications, APIs, and cloud-hosted solutions for small-business clients on a freelance basis.
- Handled projects end to end: architecture, build, deployment, and client communication.

## **G World Properties, Web Developer**

*Sep 2015 to Sep 2018 · Orlando, FL*

- Built and maintained websites, internal tools, and APIs for a real-estate company, working primarily with WordPress, MySQL, and Python.
- Contributed React/Node and Spring components to web applications and services.

## **AWARDS**

---

- **2x Bravo awards**, The Home Depot

## **EDUCATION & CERTIFICATIONS**

---

- **Western Governors University**, B.S. Software Development, 2021
- **Google Cloud**, Professional Cloud Architect (earned 2023)
- **ITIL Foundation**, 2020
