Tampa Bay, FL | Remote U.S.

PROFESSIONAL SUMMARY

Backend and reliability engineer with ~5 years at enterprise scale, following earlier web-development work from 2015. Built and ran Go payment-authorization services on distributed SQL (CockroachDB) and carried on-call for them. Now owns production reliability, observability, and deployment governance for a large, integration-heavy Home Services platform in a ~\$6B division: telemetry pipelines, SLOs and Critical User Journeys, and CAB-governed releases.

WORK EXPERIENCE

The Home Depot - Home Services

Mar 2026 - Present

Site Reliability Engineer

Remote (Atlanta, GA)

- Drove a production change through CAB / change approval solo; took the first Home Services application through the new CI/CD governance path (production readiness, branch protection, rollback planning) and made it the repeatable pattern later applications followed.
- Owned a transaction-metrics ETL application end to end (design, schema, CI/CD, production readiness); cut an over-engineered star-schema after validating that real Grafana/alerting query patterns did not justify it.
- Helped define and operationalize SLOs, health checks, Critical User Journeys, and a leadership-facing monitoring model across payments, orders, and consultations, built on OpenTelemetry, Prometheus, Grafana, and BigQuery.
- Cut recurring false-positive alerts by replacing time-based muting with volume-aware thresholds, peer cross-checked so real incidents still page.
- Became the person other teams call to pull the right logs and scope impact quickly, while consistently bringing in the formal on-call engineer. Two Home Depot Bravo awards (pipeline recovery; production incident response).

The Home Depot - Enterprise Payments

Jan 2024 - Mar 2026

Software Engineer II

Remote (Atlanta, GA)

- Built and maintained Go services on the Common Authorization Services platform (credit/debit authorization, reversal, refund) on CockroachDB, deployed to GKE and Pivotal Cloud Foundry across a 2,300+ store rollout.
- Worked the Card Broker microservice: request validation, duplicate detection, format conversion, and routing to the legacy NonStop or Fiserv proxy path.
- Worked Enterprise Gift Card Tender from initial design onward - a centralized API for balance inquiry, authorization/reversal, activation, and balance adjustment - contributing design, implementation, production-readiness review, alerting, and on-call support.
- Contributed to modernization off legacy NonStop and to PCI-scope reduction via proxy layers.
- Carried the on-call rotation and contributed to production incident response: fast log retrieval, hypothesis generation, and cross-team coordination; contributed to the resulting blameless postmortems.

Daugherty Business Solutions

Apr 2022 - Jan 2024

Software Engineer, Enterprise Payments Consulting Engagement (Client: The Home Depot)

Remote

- Joined the Card Broker authorization service before it deployed to any stores; contributed Go code, tests (Ginkgo/Gomega), and rollout support as it went to production across the store fleet.
- Built and supported card-authorization routing and processor-integration logic with duplicate-check and validation guarantees.
- Contributed to gift-card tender services supporting payment workflows.
- Built automated testing and continuous-delivery controls for these financial transaction systems.

Menez Enterprises

Sep 2018 - Apr 2022

Independent Software Consultant

Greater Orlando / Tampa, FL | Freelance

- Built and maintained web applications, APIs, and cloud-hosted solutions for small-business clients on a freelance basis.
- Handled projects end to end: architecture, build, deployment, and client communication.

G World Properties

Sep 2015 - Sep 2018

Web Developer

Orlando, FL

- Built and maintained websites, internal tools, and APIs for a real-estate company, working primarily with WordPress, MySQL, and Python.
- Contributed React/Node and Spring components to web applications and services.

EDUCATION

B.S. Software Development Western Governors University

2021

CERTIFICATIONS

Professional Cloud Architect

Google Cloud

2023

ITIL Foundation

2020

SKILLS

Languages & Backend: Go (Golang), Python, Java, REST APIs, CockroachDB (distributed SQL), SQL

Cloud & Platform: GCP, GKE, Kubernetes, Pivotal Cloud Foundry, BigQuery, Terraform, CI/CD (Jenkins, Spinnaker), Cloud Run, Cloud Build, Linux

Reliability & Observability: SRE, OpenTelemetry / OTLP, Distributed Tracing (Jaeger), Prometheus, Grafana, PagerDuty, SLOs/SLIs, Critical User Journeys, Incident Response, On-Call

Data & Delivery: Metrics Data Modeling, ETL Pipelines, Deployment Governance (CAB), Rollback Planning, Production-Readiness Review

Integration & Payments: Salesforce Integration, Apigee, Copado, Card Authorization Routing, Processor Integrations, Gift-Card Systems, Java/Tomcat
